Executive Stakeholder Summary

Nassau Candy Distributor - Product Line Profitability & Margin Performance

Sales	Gross Profit	Gross Margin	Profit / Unit
$141,784	**$93,443**	**65.9%**	**$2.42**

Decision Message

The portfolio is profitable overall, but financial performance is highly concentrated. Chocolate produces 95.1% of gross profit, and only five of fifteen products are needed to exceed 80% of total profit. Management should protect the core chocolate profit pool while using targeted corrective actions on margin-poor peripheral products.

Priority Findings

- Top profit product: Wonka Bar - Scrumdiddlyumptious - $19,358 gross profit at 69.4% margin.
- Primary margin risk: Kazookles - 7.7% margin and only $0.25 profit per unit.
- Other division efficiency gap: 6.8% of revenue versus 4.6% of profit.
- Sugar division is small (0.30% of sales) but not structurally margin-poor (66.6% margin).
- No major high-sales/low-margin SKU was found among the five dominant chocolate products.

Recommended Actions

- Urgently review Kazookles pricing, cost base and portfolio fit.
- Test price/cost improvement for Lickable Wallpaper before considering rationalization.
- Protect supply and commercial availability for the five core chocolate products.
- Add contribution-margin inputs such as freight, warehousing, discounts and returns.
- Use the Streamlit dashboard as a monthly SKU margin governance tool.

Governance / Data Caveat

The supplied Ship Date values are inconsistent with the Order Date period, so shipping-duration or route-performance conclusions are excluded. The analysis is restricted to validated financial fields and product/division structures.
